Career Openings Es

Transforming retail one shopper at a time. Are you up to the task? [Let's talk.](#)

Data Analyst Engineer

[APPLY](#)

Insights · San Jose, California

Description

Looking to be the incubator for solving complex analytics problems before our R&D team? The Insights Team at RetailNext is hiring for an Analyst to push the limits on what our data can do for retailers.

Description:

Analyzing more than 800 million shoppers a month across dozens of retail chains, RetailNext is the leading provider of in-store analytics. We work with the noisiest, messiest data of all: human behavior.

As an Insights Analyst, you will take disparate individual customer data and use advanced techniques to turn into digestible insights that can help retailers better their customer experience. The ideal candidate has a proven track record of applying quantitative models to significantly improve the outcomes of business processes. Here at RetailNext, you have an opportunity to make a giant splash in the data world of retail by analyzing some of the most unique, novel, and dynamic data in the world.

What are you? You love the no-nonsense quantitative world, but understands that data is interpreted in the eyes of the beholder. Your wizard data storytelling skills allow you to successfully bridge the gap between your models and the rest of the world. You are methodically lazy: preferring to script machines to spend time on tasks you would rather spend elsewhere.

Help make a meaningful impact in the fast-paced, dynamic, and challenging world of retail analytics.

Specific responsibilities will include:

1. Take RetailNext's rich set of disparate data and prepare actionable recommendations for our retail customers by building and refining statistical forecasts and models of critical business phenomena, including time series analysis, cluster analysis, and regression testing
2. Come up with creative ways to answer ad-hoc client questions that are specific to their business
3. Partner with the Retail Expert team to design and implement advanced data solutions for customers
4. Create and sometimes present client presentations
5. Work with product management, engineering, support, and

other functions within the company to advance data initiatives and ensure data integrity

6. Be an active member/contributor to an incredible analyst team at a dynamic leading-edge technology company

Skills you'll have

- Demonstrated experience with statistical forecasting, pattern recognition, and time series analysis a must; proficiency with statistics languages including R, and/or SAS is required
- Knowledge of programming languages is required; Python or Java is preferred
- Ability to explain complex problems, solutions, or the essence of a quantitative model to a layperson
- Resourceful and scrappy: you don't wait for someone to tell you what to do
- Passionate about consumer behavior and how that can be translated into data: you can look at data and understand what is going on in the store
- Ability to glean actionable insights from large data sets and find the story within the data
- Strong understanding of and sensitivity towards data integrity and cleanliness: you take time to identify and resolve outliers or anomalies
- Excellent attention to detail, in terms of both numerical data as well as presentation precision and aesthetics
- Ability to thrive in a fast-paced environment and comfortable working collaboratively
